Car-Selling-E-Commerce-Website-Layout-Design

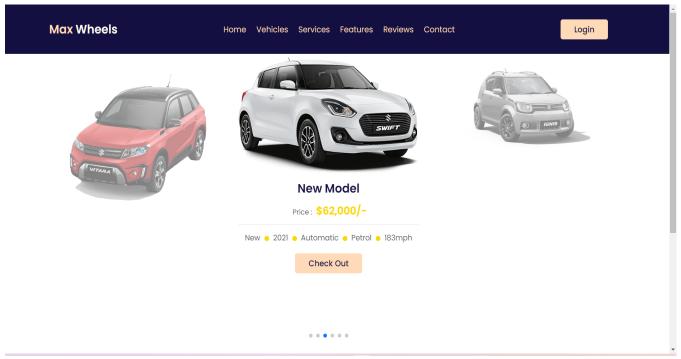

It is the design of an e-commerce website layout. This design was developed to qualify for technical round 2. This great website was made utilizing HTML, CSS, and JavaScript features. I hope you like my work.

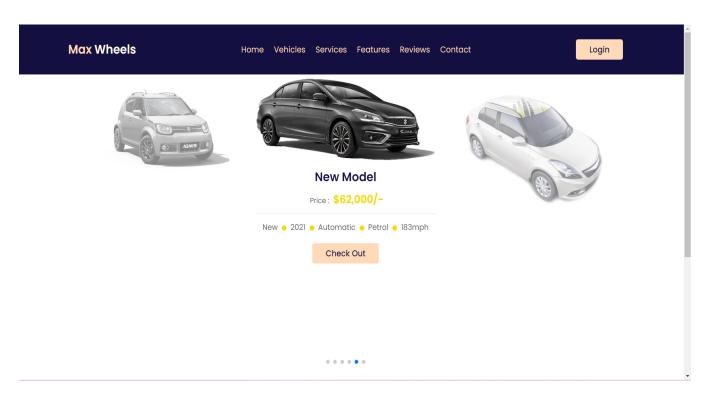

There is 1 website and 5 more hyperlinks to this website. All pages have a header section and a footer section. In the navbar section, all tabs will be highlighted when the cursor is pointed at them.

• The home page is on the first page. It has a header section, a home page section, an icons section, and a footer section.

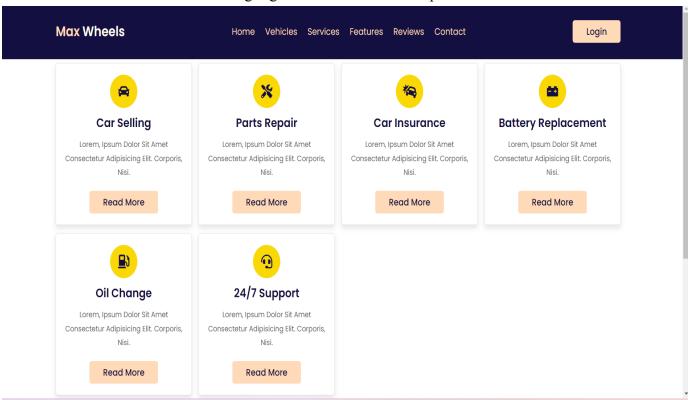

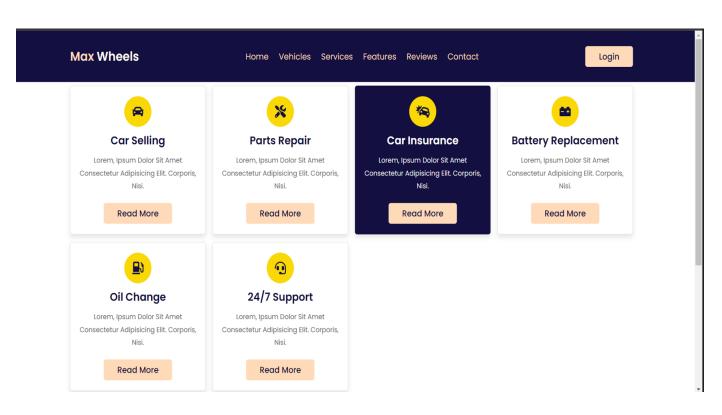

• The vehicle page is the second page of this website. It has a slider that moves horizontally every 5 seconds. It also has small details about existing cars, upcoming new cars, prices of cars, etc.

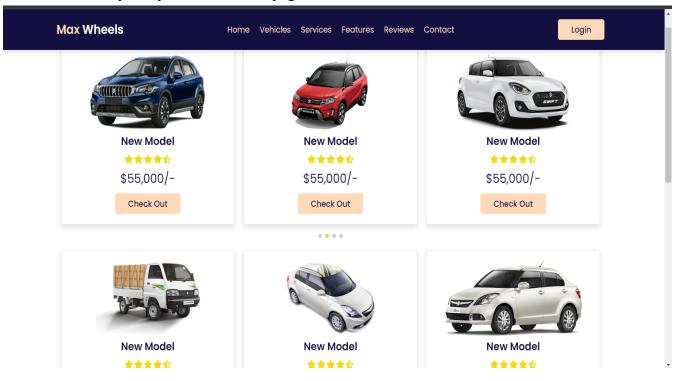

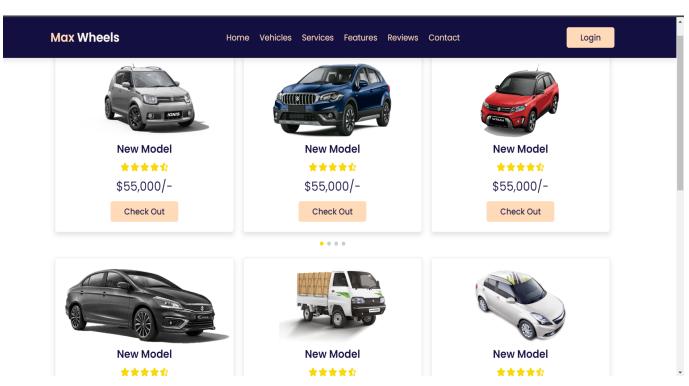

• The service page is the third page of this website. It has a card for all types of car services. All the tabs will be highlighted when the cursor is pointed at them.

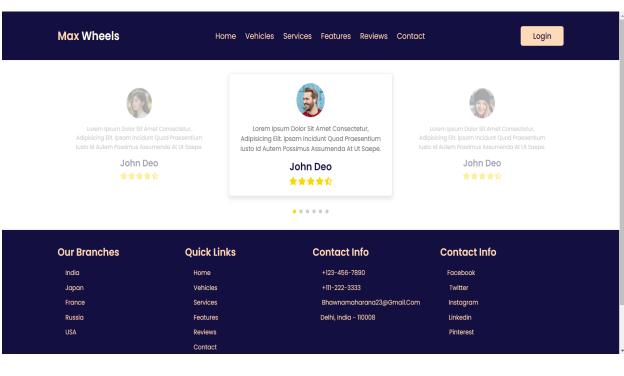

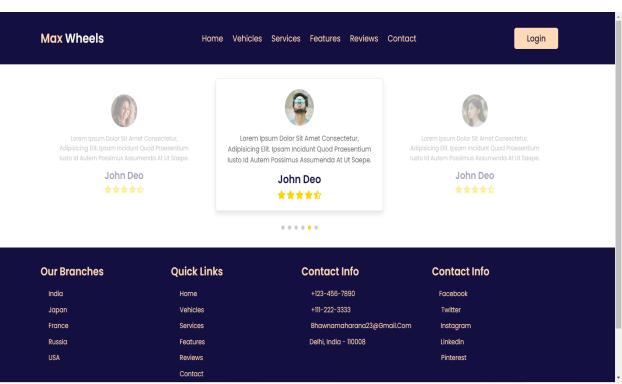

• The feature page is the fourth page of this website. It also has a slider that moves horizontally every 3 seconds. This page has all the information about cars.

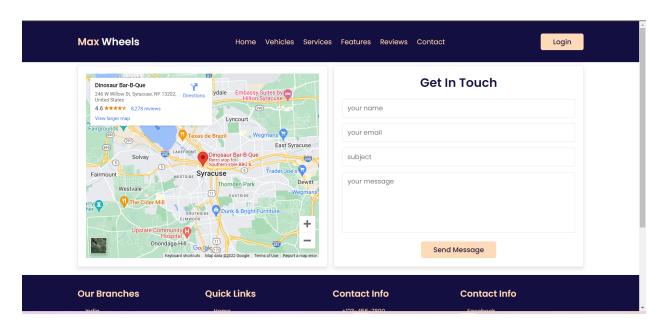

• The review page is the fifth page of this website. It also has a slider that moves horizontally every 3 seconds. It has all the reviews of the sold cars from the clients who bought the cars.

• The contact form page is the last page of this website. It is divided into 2 sections, such as one being the map section and the other being the contact form page.

• One page is the login page. It is not a page but a popup slide that will pop up when you click on the login button in the navbar section.
